(57) Abstract :
ABSTRACT A COMPUTER-IMPLEMENTED CUSTOMER SEGMENTATION SYSTEM The invention relates to a computer-implemented customer segmentation system (100) that automates the processing of customer data using a multilayer technical architecture. The system comprises a data layer (101) storing demographic and spending datasets, and a model layer (102) executing a K-Means clustering algorithm to generate customer segments. A backend layer (103), implemented using a FastAPI framework, provides APIs for receiving input data, invoking the clustering model, and returning segmentation results. A frontend layer (104) includes a Streamlit dashboard for real-time visualization of cluster outputs. A cloud layer (105) deploys the backend and frontend across one or more cloud platforms including AWS, Azure, or Google Cloud, enabling scalable execution, distributed processing, and remote accessibility. The system provides an integrated, automated solution for customer segmentation and visualization. [to be published with figure 1]
